

Input	Expected Output	Actual Output	Comments
I	1	1	
XLII	42	42	
III	3	3	
XII	12	12	
VIII	8	8	
XIV	14	14	
CDXLIV	444	444	
MMXXVI	2026	2026	
MCMXCIX	1999	1999	
DCCC	Illogical	Illogical	I DID IT. With the help of Flint, I was able to make the code check if the numeral was logical or not and then print "illogical" if it's not logical
LLLLL	Illogical	Illogical	
IL	Illogical	Illogical	
CVXD	Illogical	Illogical	
IVCXI	Illogical	Illogical	
LLLMMMCCCXXXX	Illogical	Illogical	
iiii	Illogical	Illogical	
icxc	Illogical	Illogical	
IXIX	illogical	illogical	This one was annoying, but it was the same illogical thing: if the numeral has the same thing twice, it invalidates it
vv	Illogical	Illogical	
XXXXX	Illogical	Illogical	
This	invalid	invalid	
Is	invalid	invalid	
So	invalid	invalid	
Boring	invalid	invalid	
XIXVp	invalid	invalid	

123	invalid	invalid	
Blah	-1	invalid	Main in my program prints invalid when the method isValid returns false.
IAX	invalid	invalid	
HAHA	invalid	invalid	
IVIVUAUUAU	invalid	invalid
